THE MOST VERSATILE
1470 NM LASER

ENDOLIFT[®] | LADYLIFT[®]

FRACTIONAL NON-ABLATIVE SKIN REJUVENATION | LASER ASSISTED LIPOLYSIS
PHLEBOLOGY | PROCTOLOGY | GENERAL SURGERY | MEDICAL THERAPY

LASEMaR[®] 1500 for fractional rejuvenation, laser assisted lipolysis and phlebology.

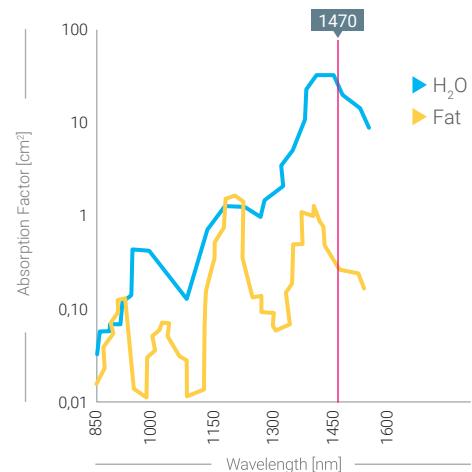

www.eufoton.com

LASEmaR® 1500 is the ideal laser for aesthetic medicine, plastic surgery and endovenous surgery. In plastic/aesthetic surgery the phenomenon, caused by its specific wavelength, is a simple and quick emulsion of fat for the laser assisted lipolysis.

The use of a lower level of energy applied in Endolift® adds up the clear benefits of skin tightening.

LASEmaR® 1500 is applied for fractional rejuvenation and the treatment of acne scars, thanks to the LIGHTSCAN™ (Fractional Technology). In phlebological surgery LASEmaR® 1500 at 1470nm is known as the present gold standard for the EVLA (Endovenous Laser Ablation) in the outpatient elimination of saphenous reflux.

ADVANTAGES

- **Multifunctionality** - changing its handpieces and preset protocols, the laser is immediately usable for all the different treatments.
- **EPC - Effective Pulse Control**, maximization of the concept of selective photocoagulation for water and fat.
- **Absolute portability** thanks to the smart trolley.
- **Software** - all the treatments are preset and adjustable thanks to the easy and intuitive software.
- **Security** - the software permits to set the target parameters, warning the operator of its achievement with different voiced feedbacks, without the necessity of diverting the attention from the patient.
- **Self diagnosis** - principal circuits are continuously supervised from a security system, which informs the operator of the eventual anomalies and whenever it is necessary, it stops automatically the emission.
- **Ordinary maintenance** is not necessary and there is no need of consumption materials.
- **Working capacity** of different hours per day without any problem of overheating.

► LASEmar® 1500 - APPLICATIONS AND ACCESSORIES

ENDOLIFT®

ENDOLIFT®* is a new office based procedure of laser interstitial lifting, which takes advantage of small fibers inserted without

incisions in order to obtain a lifting and immediately visible skin tightening, which are long-lasting. No use of anesthesia.

CLOSED LOWER BLEPHAROPLASTY: Before - After

NECK: Before - After

ENDOLIFT® PROBES
Different calibres
(from 200 to 1000 micron)
linear and radial fibers are available.
Single use.

400 nm	_____
600 nm	_____
1000 nm	_____

AESTHETICS AND DERMATOLOGY:

FRACTIONAL NON ABLATIVE REJUVENATION

LASEmaR® 1500 permits the non-ablative skin rejuvenation through the fractional technology LIGHTSCAN™. The treatment is made through a creation of microcolumns (MTZ Micro Thermal Zone) separated by healthy tissue, in order to have a little downtime, avoiding periods of convalescence.

LASEmaR® 1500 is particularly indicated for:

- ▶ facial wrinkles*.
- ▶ scars.
- ▶ stretch marks.
- ▶ pigmented and senile lesions.
- ▶ acne scars.
- ▶ skin firming and tightening procedures*.
- ▶ shrinking and pores*.

ADVANTAGES

- ▶ No anaesthesia.
- ▶ Suitable for those who desire little or no downtime.
- ▶ Reproducible, stable and satisfactory results in 3 to 5 sessions.
- ▶ Possibility to treat different zones: face, neck, hands, abdomen and chest.

FRACTIONAL REMODELLING : Before - After

ACNE SCARS: Before - After

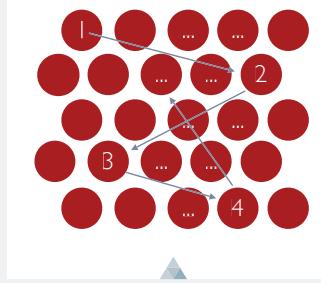

PIGMENTATION - MELASMA : Before - After

LIGHTSCAN™ 1500

RANDOM PATH

Computerized fractional scanner.

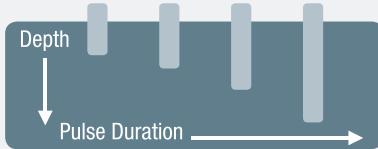

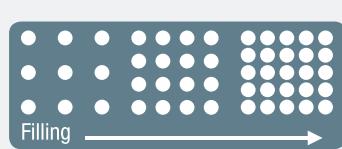

Energy, dots quantity and filling density are variable for customized settings.

LIGHTSCAN™ 1500

Dimensions and density of the spot are adjustable by the operator. Linear or random scanning mode. Absence of overlapping of the pixels. Time variable with possibility of pulse repetition.

ADVANTAGES

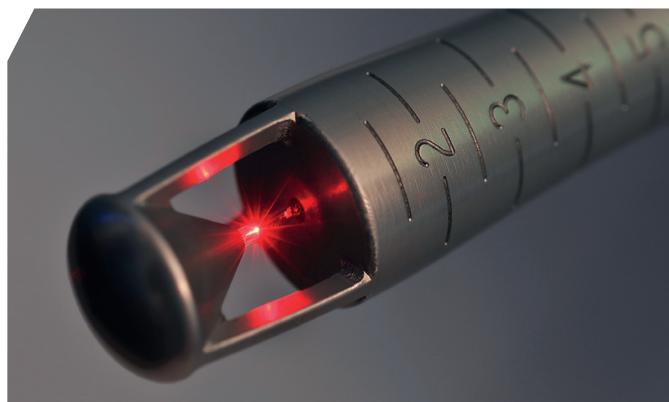

- ▶ Dimensions and density of the spot are adjustable by the user.
- ▶ Linear or random scanning mode.
- ▶ Setting of impulses/fluency variable and possibility to repeat the impulse (stucking).
- ▶ Absence of overlapping of the pixels.
- ▶ Time variable with possibility of pulse repetition.
- ▶ EPC - Effective Pulse Control, maximization of the concept of fractional non ablative photothermolysis.

GYNECOLOGY

The protocol LADYLIFT® is a safe treatment with no side effects for vaginal atrophy, stress urinary continence and tone of the vaginal walls. A new and innovative technique combines the action of the infrared laser and the LADYLIFT® handpiece in order to accelerate the production and the remodeling of mucosa's collagen.

Applications: vaginal rejuvenation*, urinary incontinence, vaginal atrophy, vaginal relaxation, diseases associated to postpartum alteration, HPV, cysts, dryness, itch.

LADYLIFT® VAGINAL
HANDPIECE
For vaginal treatment.

MINITHERAPY LADYLIFT®
VULVO-PERINEAL HANDPIECE
External vaginal treatment.

GYNÄCOLOGICAL
SURGICAL PROBE
Surgical treatment of:
- Neoplasms.
- Gynaecological surgery/labioplasty.

LASER ASSISTED LIPOLYSIS | LASER ASSISTED LIPOSUCTION

LASEMaR® 1500 is a fast and efficient laser for fat emulsion, skin tightening and contouring. It can be operated on face, neck, cheeks, abdomen, inner thighs, hips, gluteus, knees, arms and in all the fibrotic skins altered by ageing or by a previous operation of classic liposculpture. The results are already evident from the first treatment, but the optimal outcome will be reached after some months. It is possible a quick reabsorption of potential edemas, contusions and post intervention hematomas using the Multitherapy handpiece, thanks to its antalgic and photobiomodulating action.

BODY: Before - After

GLUTEUS: Before - After

ADVANTAGES

- ▶ Local anaesthesia only.
- ▶ Absence of incisions thanks to the micro cannulas.
- ▶ The speed of the treatment is due to the immediate fat emulsion.
- ▶ Limited thermal damage of neighboring tissues.
- ▶ Different sterile fibers and kits for different body areas.
- ▶ Rapid recovery of social and working activities.
- ▶ Visible results after one session.
- ▶ The device can be used both with frontal and radial fibers. Moreover, the radial emission permits a wider and even heat emission and distribution, which is a positive outcome for temperature control capabilities.

ABDOMEN: Before - After

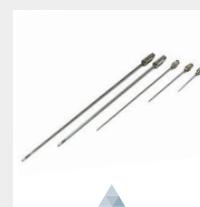

GYNecomastia : Before - After

LIPOKIT WITH OR WITHOUT SUCTION

Available different handpieces with or without suction insert. Cannulas differ for their length and calibre.

CANNULAS

Of different dimensions and calibres available upon request for fibers of 400 and 600 microns, both single use and reusable, bare and radial.

PHLEBOLOGICAL SURGERY

EVLA - Endovenous Laser Ablation.

Thanks to the highest water absorption LASERmaR® 1500 permits a better endovenous occlusion applying lower energetic levels LEED (Linear Endovenous Energy Density).

Phlebological indications:

- ▶ Treatment of the reflux of the great and small saphenous vein.
- ▶ Treatment of the periulcerosa varices.
- ▶ Treatment of fractional debridement of venous ulcers.
- ▶ Photobiomodulation of venous ulcers.

SAPHENOUS VEIN: Before - After

GENERAL AND PROCTOLOGICAL SURGERY

Minimally invasive general and proctological surgery.

HEMORROIDECTOMY

Hemofiber is a specially designed probe that shoots frontally and radially for minimal invasive of hemorrhoids of grade 3 and 4 with retractable or fixed prolapse, achieving obliteration and shrinkage of tissue with limited complications preserving the musculus sphincter ani internus and the mucosa.

ANAL FISTULAS

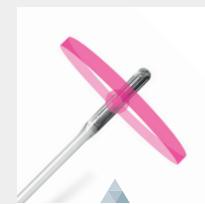

HF Ring fibers allows the closure of the fistula preserving the sphincter, without the need for medication and with a rapid return to daily routine.

HIGH LEVEL LASER THERAPY AND VULNOLOGY

With the Multitherapy Handpiece, LASERmaR® 1500 is applicable for photobiomodulation of wounds and ulcers, while through the fractional scanner LIGHTSCAN™ it can be used for surgical debridement.

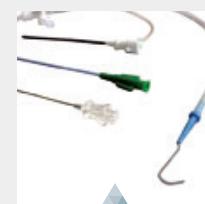

HYPERHIDROSIS

Laser sweat ablation is a procedure to stop sweating from the armpits.

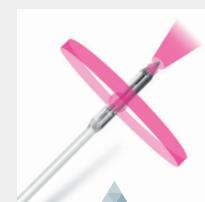

HF RING FIBER

High Focused Ring Fiber with 360° emission, single use.

INTRODUCTION KIT

Vein introduction kit complete of needle, dilatator, j-tip guide wire, sterile. Disposable.

HEMOFIBER

Frontal and annular emission for hemoroidection, single use. Autoclavable handpiece for insertion.

MULTITHERAPY HANDPIECE

For photobiomodulation, High Level Laser Therapy, inhibition of keloids. Quasi contact mode. Spot 40 mm.

OTHER ACCESSORIES

SMART TROLLEY - For an easy and safe transportation.

INFILTRATION PUMP - For local tumescent anaesthesia.

KIT FIBER MAINTENANCE - Equipped with fiber stripper and dedicated scissors.

COOLING SYSTEMS Fixed, portable, low cost.

PATIENT EYE SHIELDS Also intraocular and single use.

GOGGLES FOR OPERATOR AND PATIENT.

LASEmaR® 1500
is available in
SILVER, BLACK, GOLD and RED.

► LASEmaR® 1500 - TECHNICAL FEATURES

Wavelength (nm)	1470 nm
Laser	High Power Diode (GaAs)
Preselected programmes	Advanced software with experienced protocols to be manually customized
Pulse duration (Ton-Toff)	Adjustable from 1 to 9000 msec - step 1 ms
Number of pulses per sequence (single and pulsed mode)	From 1 to 100 - step one
Interval between pulse sequence (pulsed mode)	Adjustable 1 ms ÷ 10 sec
Operation mode	Single pulse mode - Pulsed mode - Continuous mode
Cooling system	Air cooling system combined with Peltier's Cells
Aiming beam	Red - 635 nm - 5 mw
Electrical power	110 - 230 V 50/60 Hz
Absorbed power	300 VA peak (adapted to domestic electric standard)
In compliance with	93/42/CEE IEC 60601-1 IEC 60601-1-2 IEC 60601-2-22 IEC 60825-1
FDA	CE
	0476
Weight and dimensions	8,5 kg - 30,5 x 35 x 15,5 cm
Production	Made in Italy

IN MEDIO STAT VIRTUS

LASEmaR® 800 is a laser platform designed by Eufoton for different medical and surgical indications, as dermosurgery, plastic, general surgery, cosmetology, medical therapy, representing the best solution for many different applications. Thanks to its wavelength, which is optimally absorbed by melanin, haemoglobin and exogenous chromophores and scarcely by water, it is possible to achieve the mathematical photothermalysis of the targeted lesions, reducing the risk of damaging surrounding healthy tissues even in case of unintentional movements by the operator or unpredictable movements by the patients.

ADVANTAGES

- **Multifunctionality:** Changing its handpieces and preset protocols, the laser is immediately usable for all the different treatments.
- **EPC - Effective Pulse Control,** maximization of the concept of selective photocoagulation for haemoglobin, melanin and exogenous chromophores.
- **Absolute portability** thanks to the smart trolley.
- **Software** - all the treatments are preset and adjustable thanks to the easy and intuitive software.
- **Security** - the software permits to set the target parameters, warning the operator of its achievement with different voiced feedbacks, without the necessity of diverting the attention from the patient.
- **Self diagnosis** - principal circuits are continuously supervised from a security system, which informs the operator of the eventual anomalies and whenever it is necessary, it stops automatically the emission.
- **Ordinary maintenance** is not necessary and there is no need of consumption materials.
- **Working capacity** of different hours per day without any problem of overheating.

APPLICATIONS

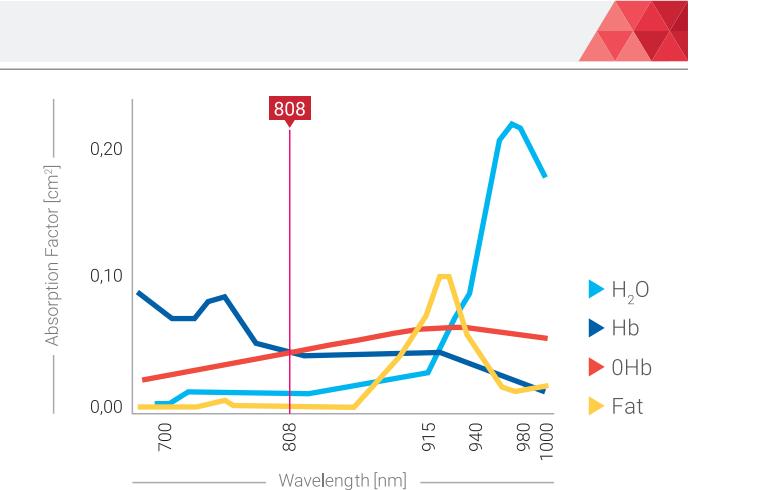

DERMATOLOGY

LASEmaR® 800 allows a selective photothermalysis on melanin chromophores (dyschromias-hair*), hemovascular chromophores (telangiectasias-angiomas) and normochromic lesions, which have been artificially stained by means of exogenous chromophores. The chromophore selectivity, together with a low water absorption, permits to make use of low energy levels, thus avoiding any anesthesia and stitches with excellent results.

SENILE KERATOSIS: Before - after

SPIDER VEIN: Before - after

ACNE

Particularly indicated for Acne both in **active phase** with green photodynamic method (PDT - ICG) through the Multi-Therapy handpiece and in **Acne Scarring** through photodynamic selective vaporization with transdermal handpiece or fractional scanner.

INFLAMMATORY ACNE: Before - after

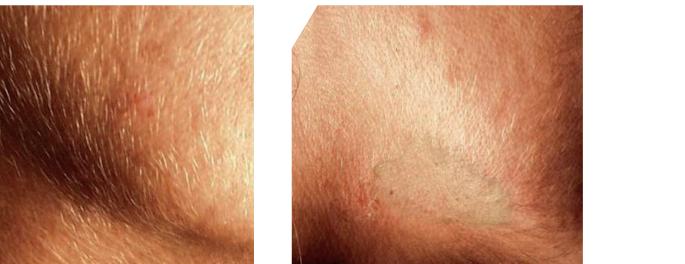

ACNE SCARRING: Before - after

HAIR REMOVAL

In addition to the classical method for selective photothermalysis (ideal on fair skin phototype or dark hair), LASEmaR® 800 can execute treatments of photodynamic cosmetic hair removal* (PDT - ICG) on dark phototypes with fair hair (including blond and white hair). This technique can be applied to the whole face.

PDT HAIR REMOVAL: Before - after

ENDOLIFT™

It is a new mini-invasive technique used to boost skin restructuring*. Thanks to this method it is possible to create a subcutaneous grid stimulating tissues and creating lines of temporary fibre retraction that foster tissue restructuring and connective tissue photobiomodulation*. This technique can be applied to the whole face.

ENDOLIFT: Before - after

ILT ON DERMAL FILLERS COMPLICATIONS

ILT - Intralesional Laser Therapy for granulomas caused by filler injections. The treatment ILT evacuates most of the granuloma caused by a foreign body (filler) interrupting rapidly the inflammatory process.

GRANULOMA: Before - after

HIGH LEVEL LASER THERAPY - HLLT

The very well known wavelength of 808 nm in association with high power emission mode makes LASEmaR® 800 available to transmit into deep high therapeutic fluencies in very short procedural time. LASEmaR® 800 has several effects: antiinflammatory, analgesic, regenerative on connective tissue, biostimulating on lymphstream and phagocytosis. It is ideal for the treatment of tendonitis, contractures, ulcers, sores, osteoarthritis, post-traumatic pains.

LATERAL EPICONDYLITIS

ACCESSORIES

VARIABLE FOCUS HANDPIECE ZOOM 800
For transdermal applications (dermatological lesions, vascular, pigmentations) for the safe maintenance of the chosen spot size.

HANDPIECE FOR MICROLIPOSURGICAL
With cannulas of variable diameters and length.

FRACTIONAL LIGHTSCAN 800
Scanner with its dedicated management software. Possibility to select path: random or linear modality, creation of different figures. Applications: fractional rejuvenation.

MINI THERAPY HANDPIECE
For the treatment of the most frequent dental dyschromies.

SCANNEmaR 800
Rotating scanner with electronically-controlled ellipsoid movement.
Applications: rejuvenation (skin remodeling), vulnology (debridement).

OPTICAL FIBERS AND RELATED ACCESSORIES
Single use and reusable. Different calibres are available: from 100 to 1000 micron.

OTHER ACCESSORIES
For contact applications in combination with optical fibers.
Applications: surgery, dermatology, oral surgery.

Skin Cooling Systems
To reduce skin temperature during laser treatments; used in injection therapy, filler and dermo - electro surgery as well.

PROTECTIVE GLASSES
For the operator and the patient.

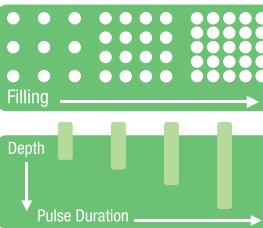

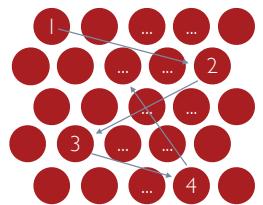

SMART TROLLEY
Resistant trolley for easy and safe transport.

LASEMAR® 500

THE DELICATE LASER TO ERASE SKIN'S IMPERFECTIONS

VASCULAR LESIONS | PIGMENTED LESIONS | SKIN BENIGN LESIONS
SCARS, KELOIDS AND STRETCH MARKS | PHOTOREJUVENATION | DENTISTRY

LASEMAR® 500 is the gold standard in the treatment of pigmented and vascular skin lesions, due to its extremely high absorption by oxy-haemoglobin and melanin.

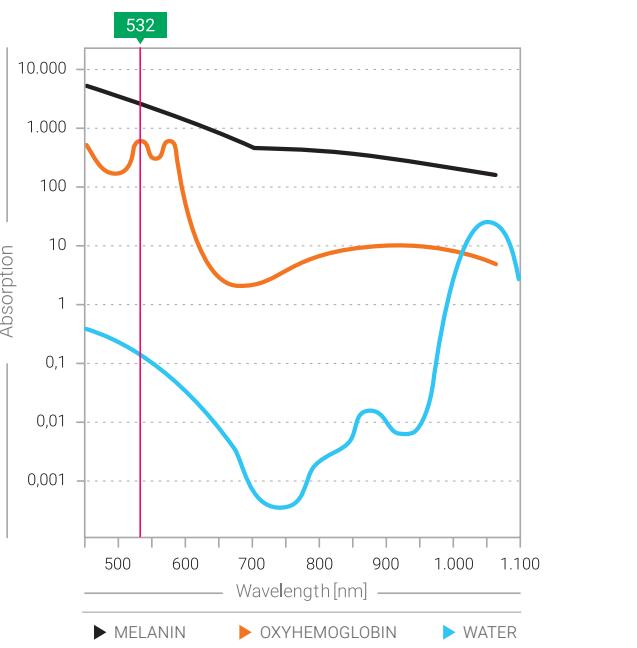

www.eufoton.com

FOR A SUPERFICIAL USE

LASEmaR® 500 is the gold standard in the treatment of superficial and vascular skin lesions. Its diode of green wavelength (532nm) represents the maximum absorption by melanin and oxy - haemoglobin (see diagram at the right).

ADVANTAGES

- **Multifunctionality.** Changing its handpieces and preset protocols, the laser is immediately usable for all the different treatments.
- **Absolute portability** thanks to the smart trolley.
- **Software** - all the treatments are preset and adjustable thanks to the easy and intuitive software.
- **Security** - the software permits to set the target parameters, warning the operator of its achievement with different voiced feedbacks, without the necessity of diverting the attention from the patient.
- **Self diagnosis** - principal circuits are continuously supervised from a security system, which informs the operator of the eventual anomalies and whenever it is necessary, it stops automatically the emission.
- **Ordinary maintenance** is not necessary and there is no need of consumption materials.
- **Working capacity** of different hours per day without any problem of overheating.

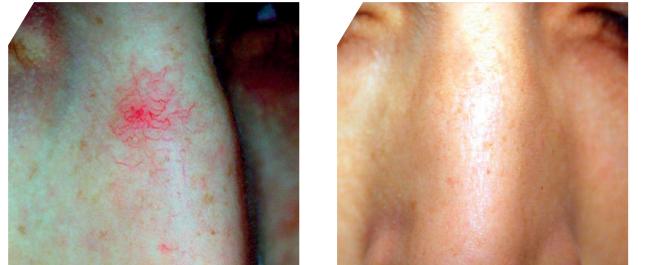

APPLICATIONS

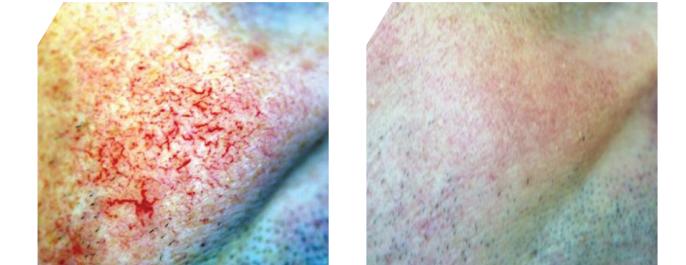

VASCULAR LESIONS

Red telangiectasias, Couperose, Matting, Neovascularization, Rosacea, Port wine stains (PWS), Venous lake, Senile angiomas, (stellate, cherry).

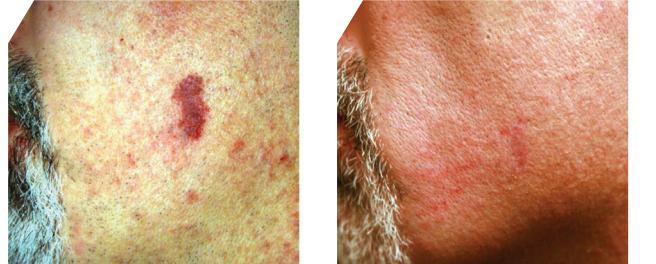

SPIDER NAEVUS: Before - after

CHEEK TELEANGECTASIA: Before - after

FACIAL ANGIO: Before - after

MATTING: Before - after

PIGMENTED LESIONS

Freckles, Dermatoses, Café au lait stains, Papulosis nigra, Hyperkeratotic lesions, Poikiloderma of Civatte.

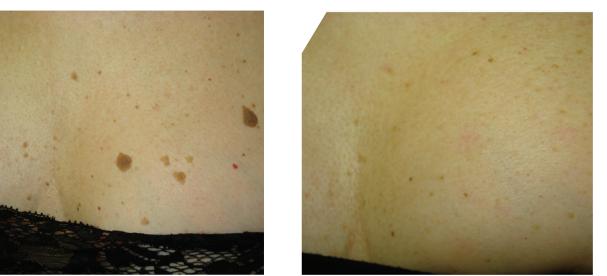

HAND MELANOSIS: Before - after

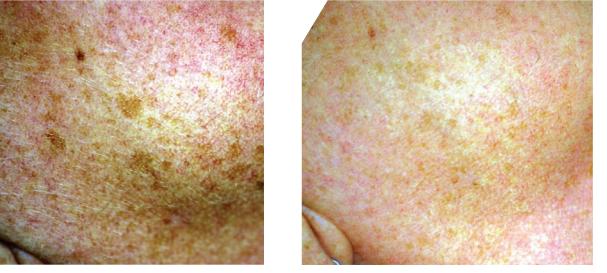

LENTIGO: Before - after

SCATTERED HYPERPIGMENTATIONS: Before - after

LENTIGO AND REJUVENATION: Before - after

HYPERKERATOTIK LESION: Before - after

SCARS AND GRANULOMAS

Hyperkeratotic scars, vascularized keloids, red stretchmarks*, red scars.

CUT WOUND: Before - after

ABDOMINOPLASTY SCAR: Before - after

ORTHOPEDIC SCARS: Before - after

FINGER WART: Before - after

ACCESSORIES

VARIABLE FOCUS ZOOM 500 HANDPIECE

For transdermal applications (dermatological and vascular lesions and pigmentations) for the safe maintenance of the chosen spot. For contactless applications. Spot size: from 0,5 to 2 mm.

SURGICAL HANDPIECE

For applications in dermatosurgery in combination to the micro - optical fiber (0,2 mm spot).

MINI THERAPY HANDPIECE

Applications: photobiomodulation, cosmetic dentistry.

SMART TROLLEY

Resistant trolley for easy and safe transport.

OTHER ACCESSORIES

POLARIZED LIGHT HELMET

For a perfect vision of superficial, vascular and pigmented lesions.

COOLING SYSTEMS

Different versions available: both fixed and portable.

METALLIC CART

EUFOTON VACUUM II

Surgical smoke evacuator complete of active carbon's filter and articulated arm.

PROTECTIVE GLASSES AND EYE PROTECTORS

For the operator and the patient.

SPECTRUM VASCULAR DUAL BOOST

With the innovative Dual Boost technology, Spectrum® allows to treat transdermally vascular lesions (telangiectasias) in a much more efficient way than the traditional use of a single wavelength. Dual Boost permits the combined use of the green light 532nm, more selective for the oxy-hemoglobin, and the infrared light 808/940nm, mainly absorbed by the methemoglobin. The two wavelengths are delivered simultaneously and sequentially in the same handpiece, generating a much more selective photothermolysis.

NEW
VASCULAR TRANSDERMIC
BROADBAND HANDPIECE

CHARACTERISTICS

The sequential emission with **Spectrum®** provides the common action of the visible wavelength associated with the infrared wavelength. The first part of the visible pulse rises the temperature in the vessel, converting oxy-hemoglobin into methemoglobin increasing the absorption of the second part of the pulse by 500%.

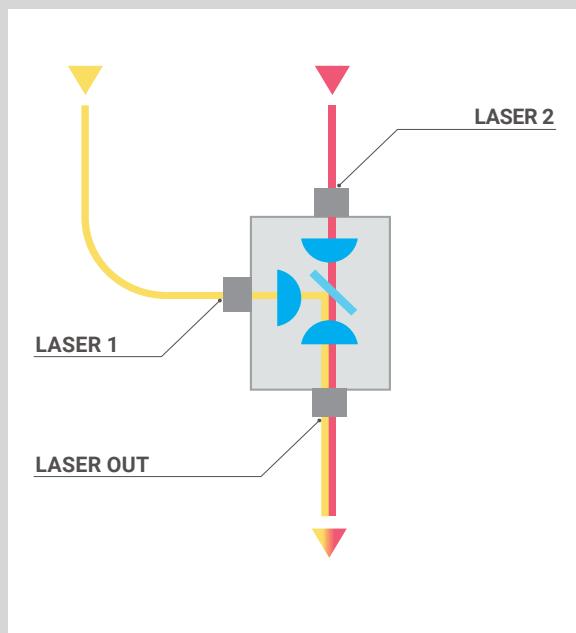

The visible wavelength allows to obtain a complete coagulation and therefore occlusion inside the vessel, leaving unharmed the tissue around (cutaneous annexes).

When the infrared light hits the target vessel, it enables the use of inferior fluences with subsequent higher safety for the patient, reducing considerably the risk of complications such as redness, pigmentations or burn. Less side effects means that the patient can go back to everyday activities immediately.

Thanks to the higher selectivity, the results obtained are better than those brought with the use of a single wavelength.

With the technology **Dual Boost**, **Spectrum®** brings maximum results in the removal of vascular blemishes in less time than single wavelength systems.

With the new technology physicians can provide to their patients better comfort, safety and satisfaction.

L'EVOLUZIONE DELLA CHIRURGIA LASER MININVASIVA

CHIRURGIA FLEBOLOGICA E VASCOLARE | PROCTOLOGIA

La malattia venosa cronica degli arti inferiori rappresenta una condizione patologica purtroppo molto comune che colpisce circa il 25% delle donne ed il 15% degli uomini.

Inoltre, l'alto tasso di recidiva ed il rischio di evoluzione verso ulcere croniche, incidono gravemente sul sistema sanitario.

La tecnologia attuale EVLA è il risultato di oltre 20 anni di ricerca ed innovazione e permette una progressiva evoluzione verso un trattamento flebologico ambulatoriale, più che mai necessario, sia per la mininvasività che per motivi economici.

Da circa 10 anni lo stato dell'arte tecnologico EVLA è rappresentato dalle lunghezza d'onda maggiormente interferenti con l'acqua (1470 / 1940 nm) che grazie ai software interattivi consentono di standardizzare agevolmente verso il basso i valori di **LEED - Linear Endovenous Energy Density** - sui quali si basano i successi a lungo termine delle fototerapie laser.

L'introduzione delle ultime generazioni di fibre radiali ad alta focalizzazione **HF RING**, che combinano l'elevata efficacia della sorgente laser sul cromoforo acqua con un'emissione laser omogenea ed estremamente precisa, hanno praticamente annullato i tassi di perforazione della parete venosa.

Inoltre, l'elevata ecogenicità delle fibre HF Ring assieme al software dell'unità laser, che fornisce un controllo costante della LEED, consentono risultati operatori che sono da considerarsi eccellenti nel breve termine (2 anni) e totalmente competitivi nel medio-lungo termine (>5 anni), rispetto alle altre opzioni

terapeutiche (chirurgia ablativa). La disponibilità di fibre radiali di dimensioni diverse, in particolare 600 micron e 400 micron consente di trattare non solo la GVS, ma anche la PVS, gli altri distretti varicosi extrasafenici, i monconi e le perforanti.

LA PROCEDURA

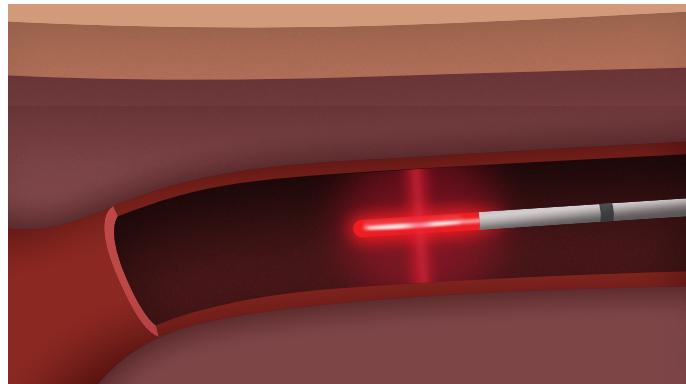

Eufoton® propone una metodologia di fotoablazione endovascolare mininvasiva ecoguidata associabile anche ad altre tecniche combinate (flebectomie e scleroterapia).

Il trattamento avviene grazie alla combinazione dei laser della serie **LASEmaR®** (lunghezze d'onda a 980, 1470 - singola o Dual / o 1940 nm) e delle fibre ottiche di tipo radiale ad alta focalizzazione **HF RING**.

Sicurezza, replicabilità ed adattabilità della procedura

Parametro fondamentale per la riuscita dell'intervento è l'energia per centimetro lineare di vena - LEED - Linear Endovenous Energy Density - la quale viene monitorata sullo schermo del laser e segnalata acusticamente e visivamente all'operatore che agisce sempre in modalità ecoguidata. La corretta impostazione della LEED secondo le caratteristiche del singolo vaso permette la distribuzione dell'energia laser in modo uniforme evitando dosi energetiche errate (sotto/sovradimensionate).

Prima - Dopo

Le fibre ottiche endovascolari **Eufoton® HF Ring** rappresentano l'ultima evoluzione tecnologica delle fibre **Eufoton®** ad alta focalizzazione radiale. Sono progettate per emettere un anello di luce laser focalizzato su un microspot e permettono una diffusione di energia anulare ultra-precisa e di conseguenza un'ablazione che **richiede parametri energetici inferiori rispetto alla concorrenza.**

I vantaggi ottici delle fibre HF Ring sono così riassumibili:

**MAGGIORE FLUENZA ANULARE =
MINORE LEED (LINEAR ENDOVENOUS ENERGY DENSITY) =
MINORE DISPERSIONE TERMICA PERIVENOSA =
MINORE DOLORE POSTOPERATORIO**

Gli ulteriori vantaggi operativi sono:

- ▶ Maggiore ecogenicità rilevabile attraverso diversi tipi di ecografi;
- ▶ Accesso endovenoso facilitato grazie alla punta conica arrotondata;
- ▶ Marcatura laser a 360° del sistema di misura centimetrata per regolare esattamente il dosaggio di energia in retrazione - **LEED**;
- ▶ Presenza di un rivestimento esterno easygrip che agevola l'accoppiamento con eventuale sistema automatico di pull back **Chorus** ;
- ▶ Presenza di un puntatore ottico ad alta resa per la transilluminazione/posizionamento in vena;
- ▶ Disponibilità in due diametri 400/600 µm.

Schema ottico
HF Ring

Il vantaggio di Eufoton® Chorus

Il dispositivo pull-back ultraportatile **Chorus** consente la standardizzazione automatica di retrazione della fibra e di calibrare l'energia **LEED** a seconda del diametro della vena, adattando l'emissione alle diverse caratteristiche della stessa, aumentando e diminuendo la quantità di energia, garantendo omogeneità completa e precisa per tutta la lunghezza del vaso.

Chorus funziona in sinergia con il software "cruise control" dei sistemi laser Eufoton® e consente di eseguire l'intervento rapidamente, permettendo eventuali altre procedure simultanee.

Eufoton® Chorus

HEMOFIBER & EMORROIDI

Hemofiber è una fibra laser speciale dedicata al trattamento delle emorroidi. Dispone di due punti di emissione simultanea: quello laterale emittente radialmente a 360° mentre quello frontale rilascia energia dalla punta conica. L'emissione radiale consente una migliore diffusione circonferenziale di energia per un'ablazione laterale più efficace, mentre l'emissione conica frontale facilita

l'accesso chirurgico e consente una maggiore precisione coagulativa sulla mucosa superficiale.

Viene utilizzato nelle terapie laser mininvasive per la cura delle emorroidi anche di III° e IV° con un prolasso ritrattabile o fisso.

Con **Hemofiber** si ottiene la fototermocoagulazione e successiva coartazione dei vasi emorroidari con minime complicanze; oltre a questo, la doppia missione della fibra protegge i muscoli dell'ano e della mucosa, ripristinandone rapidamente la naturale struttura anatomica.

Vantaggi Hemofiber

- ▶ Punta conica ad emissione frontale per un accesso mininvasivo facilitato associata ad una seconda emissione radiale a 360° a valle della frontale;
- ▶ Connettore tipo Luer-lock innestato sulla fibra per fissare l'ago introduttore (monouso) e il manipolo di sostegno Hemo (autoclavabile);
- ▶ Capsula emittente della fibra è costituita da una miscela silicea ad alta resistenza meccanica che permette di ridurre l'energia e di sfruttare al meglio la transilluminazione del raggio guida durante l'intervento.

TRATTAMENTO EMORROIDI : Prima e dopo

First contact.

3 Weeks after surgery.

3 Weeks after surgery, internal findings.

In campo proctologico le peculiarità ottiche delle fibre HF RING permettono di ottenere eccellenti risultati per le foto-termocoagulazioni limitando il danno termico ai tessuti circostanti e riducendo i dolori post-operatori.

Le applicazioni sono: fistola sacrococcigea e fistole perianali.

Nel trattamento delle fistole perianali la procedura laser assistita ha l'intento di chiudere la fistola preservando lo sfintere, senza la necessità di medicazioni e con un rapido recupero della routine giornaliera. Il campo di applicazioni include: fistole anali transfinteriche basse, medie e alte, indipendentemente dalla sede, dalla lunghezza e dalla tortuosità, sia uniche che multiple, sia con preventivo posizionamento di setone diretto od in corso di primo tempo di fistulectomia e, naturalmente, recidive.

I vantaggi della fistulectomia laser assistita sono:

- ▶ Massimo rispetto della muscolatura sfinteriale;
- ▶ Nessuna escissione o splitting;
- ▶ Rapida esecuzione ;
- ▶ Combinabile con altre opzioni terapeutiche;
- ▶ Nessuna medicazione;
- ▶ Scarsa componente dolorosa;
- ▶ Nessuna necessità di igiene particolare.

TRATTAMENTO LASER FISTOLA ANALE

LASEMaR® - DETTAGLI TECNICI

Lunghezza d'onda	1470nm (1940 su richiesta)
Laser	Diodo ad alta potenza (GaAs)
Programmi preselezionati	Software avanzato con protocolli comprovati da personalizzare manualmente
Modalità operativa	Modalità impulso singolo - Modalità pulsata Modalità continua
Fascio di puntamento	Rosso - 635 nm - 5 mw
Consumo energetico	300 VA picco (adeguato allo standard elettrico domestico)
Conforme a	93/42/CEE IEC 60601-1 IEC 60601-1-2 IEC 60601-2-22 IEC 60825-1
Peso e dimensioni	8,5 kg - 30,5 x 35 x 15,5 cm
Produzione	Made in Italy

LASEMaR® MINI - DETTAGLI TECNICI

Lunghezza d'onda	980nm, 1470nm, 980nm-1470nm selezionabile singolarmente
Laser	Diodo ad alta potenza (GaAs)
Programmi preselezionati	Software avanzato con protocolli comprovati da personalizzare manualmente
Modalità operativa	Modalità impulso singolo - Modalità pulsata Modalità continua
Fascio di puntamento	Rosso - 635 nm - 5 mw
Consumo energetico	130 VA picco (adeguato allo standard elettrico domestico)
Conforme a	93/42/CEE IEC 60601-1 IEC 60601-1-2 IEC 60601-2-22 IEC 60825-1
Peso e dimensioni	3 kg - 24 x 22,5 x 11,5 cm
Produzione	Made in Italy

LASEMAR® mini 450

DERMOCHIRURGIA | LESIONI VASCOLARI | LESIONI PIGMENTATE

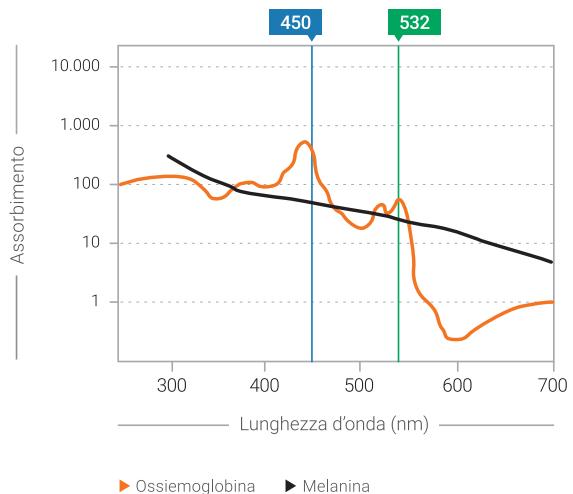

Il minilaser blu compatto per le applicazioni dermovascolari superficiali

LASEMaR®MINI 450 è il nuovo standard di riferimento nel trattamento superficiale delle lesioni cutanee e vascolari grazie al forte assorbimento da parte della melanina e dell'ossiemoglobina.

PER APPLICAZIONI DEROVASCOLARI SUPERFICIALI

LASEMaR®MINI 450 è uno standard di riferimento nel trattamento di lesioni cutanee superficiali e vascolari. Il suo diodo a luce blu (lunghezza d'onda 450 nm) consente il massimo assorbimento da parte della melanina per una delicata dermoablazione e dell'ossiemoglobina per il vascolare rosso superficiale (vedere il diagramma a destra).

VANTAGGI

- ▶ **Software** - interfaccia utente chiara e moderna con programmi preimpostati, facilmente modificabili per adattarsi ad ogni tipo di situazione.
- ▶ **Sicurezza** - il software consente di impostare i parametri target, avvertendo l'operatore del loro raggiungimento con diversi feedback sonori, senza bisogno di distogliere l'attenzione dal paziente.
- ▶ **Portabilità assoluta** - sistema mini "all in one" - disponibile a scelta la comoda valigetta o il pratico zainetto da spalla.
- ▶ **Non richiede manutenzione ordinaria** e non è necessario alcun materiale di consumo.
- ▶ **Capacità di lavoro** di diverse ore al giorno senza alcun problema di surriscaldamento.
- ▶ **Pronto per il futuro** - protocolli ed interfaccia utente aggiornabili per adattarsi ad ogni esigenza e restare sempre al passo con i tempi.

DERMOCHIRURGIA SENZA ANESTESIA

ABLAZIONE DELICATA E INDOLORE DI:

- LESIONI DERMATOLOGICHE BENIGNE EOSIFITICHE
- CHERATOSI
- VERRUCHE
- FIBROMI
- XANTELASMI
- DERMATOSIPAPULOSI NIGRA
- LENTIGO

LESIONI VASCOLARI

- TELEANGECTASIE ROSSE
- MICROCOUPEROSE MATTING
- NEOVASCOLARIZZAZIONI
- ROSACEA

MANIPOLO A FOCALE VARIABILE ZOOM

Dotato di sistema ottico zoom per applicazioni transdermiche per mantenere lo spot prescelto intatto sicurezza. Dimensioni variabili dello spot: da 0,5 a 2 mm.

ALTRI ACCESSORI

CASCHETTO A LUCE POLARIZZATA

Per una visione perfetta di lesioni superficiali, vascolari e pigmentate.

SISTEMI DI RAFFREDDAMENTO

Diverse versioni disponibili, fisse e portatili.

OCCHIALI PROTETTIVI E PROTETTORI OCULARI

Per l'operatore e per il paziente
